Tech News:

India's supercomputing capability was ranked 4th in the list of top 500 supercomputing sites in the world in 2007. However growth of supercomputing has not been at the same pace as compared to the growth in the US, Europe and some Asian countries. The national challenges and global issues such as energy, climate change, water and terrorism/homeland security call for global solutions and facilities that are comparable to that available elsewhere in the world. Recognising the importance to strengthen the supercomputing capability of the country, the NDA government has approved a National Supercomputing Mission at a total cost of Rs.4500 crore. The mission is to be jointly implemented by Department of Science & Technology and Department of Electronics and Information Technology. The main objective of the mission is to make India a world leader in High Power Computing and to enhance the national capability in solving grand challenges of national and global relevance. High Power Computing Grid; development of High Power Computing applications; manpower development and R&D for next-generation Exa-scale High Power Computing.

"Be a student as long as you still have something to learn, and this will mean all your life."

— Henry L. Doherty
